KEEPING FOOD SAFE DURING A POWER OUTAGE

Sooner or later, every home has a power outage. The electricity may have gone off during a snowstorm or thunderstorm, or the refrigerator may simply quit working. Whatever the cause, dealing with the food involved when the unit is off requires knowledge of food safety.

Columbus Public Health recommends the following guidelines for food service operations and retail food establishments:

IF YOU ARE CURRENTLY WITHOUT POWER, DISCONTINUE OPERATION IMMEDIATLEY. SERVING PATRONS WHILE YOU HAVE NO POWER CAN PUT YOUR CUSTOMERS AT AN INCREASED RISK OF FOODBORNE ILLNESS.

KEEP THE FREEZER AND REFRIGERATOR DOORS CLOSED.

Keep what cold air you have inside. Don't open the door any more than necessary. You'll be relieved to know that a full freezer will stay at freezing temperatures about 2 days; a half-full freezer about 1 day. If your freezer is not full, group packages so they form an "igloo" to protect each other. Place them to one side or on a tray so that if they begin thawing, their juices won't get on other food. Always take temperatures of food to ensure they are below 41 degrees. And, if you think power will be out for several days, try to find some dry ice (see box below). Although dry ice can be used in the refrigerator, block ice is better. You can put it in the refrigerator's freezer unit along with your refrigerated perishables such as meat, poultry, and dairy items.

HANDLING DRY ICE

- To locate a distributor of dry ice, look under "ice" or "carbon dioxide" in the phone book.
- Buy 25 pounds of dry ice to keep a 10 cubic-foot freezer full of food safe 3 to 4 days; half full, 2 to 3 days. A full 18 cubic-foot freezer requires 50 to 100 pounds of dry ice to keep food safe 2 days; half full, less than 2 days.
- Handle dry ice with caution and in a well-ventilated area. Don't touch it with bare hand; wear gloves or use tongs.
- Wrap dry ice in brown paper for longer storage. One large piece lasts longer than small ones.
- The temperature of dry ice is –216 ° F; therefore, it may cause freezer burn on items located near or touching it. Separate dry ice from the food using a piece of cardboard.
