

# Columbus Fire Community Risk Reduction

## Training Course Registration Form

Fire extinguishers are valuable tools for extinguishing small fires, and providing a path for escape. Many homes and businesses are equipped with fire extinguishers of various types. This hands-on program teaches the operator how to use their equipment properly, but stresses the importance of personal safety and escape. This program has a lecture, and a video/power point presentation which lasts approximately one hour, followed by a hands-on fire extinguisher scenario with a controlled fire.
